

Introduction to the 11th Harmonisation conference

Helge Rørdam Olesen

National Environmental Research Institute,
University of Aarhus, Denmark

Chairman of the initiative on
*Harmonisation within Atmospheric Dispersion Modelling
for Regulatory Purposes*

Initiative on

***Harmonisation within
Atmospheric Dispersion Modelling
for Regulatory Purposes***

www.harmo.org

A bit of history...

- Kick-off meeting in Ispra in 1991
- First workshop at Risø, Denmark in May 1992
- Two more workshops, then conferences every 1½ year
- Most recently in Crete, October 2005

Background for the kick-off meeting (in Ispra, 1991)

- There was (and still is) a great number of regulatory models in use within Europe.
- Generally, the models applied were not scientifically up-to-date.
- There was a lack of common standards and tools.

Harmonisation?

- It was never the idea to achieve complete harmonisation in the sense that one model is appointed as 'the one and only'.
- However: **Many tools, procedures and datasets should be harmonised.**

Central issue

- Not just a matter of harmonisation, but about making the most of the knowledge – ensuring that acquired knowledge is not forgotten, but used and included in the decision-making process.

Central issue

- Not just a matter of harmonisation, but about making the most of the knowledge – ensuring that acquired knowledge is not forgotten, but used and included in the decision-making process.
- How can we pool experiences and encourage re-use of our work?

Central issue

- Not just a matter of harmonisation, but about making the most of the knowledge – ensuring that acquired knowledge is not forgotten, but used and included in the decision-making process.
- How can we pool experiences and encourage re-use of our work?
- One of the roles of the initiative: Help establish mechanisms for this.

Central issue (2)

- Model evaluation.

11th Harmonisation Conference
Cambridge 2007

Central issue (2)

- Model evaluation.
- Model evaluation is much more difficult than outsiders tend to think.

Central issue (2)

- **Model evaluation.**
- **Model evaluation is much more difficult than outsiders tend to think.**
- **Evaluation is important because we should assure that assessments based on modelling are considered trustworthy.**

What you'll hear the next few days...

Introduction to 11th Harmonisation conference

11th Harmonisation Conference
Cambridge 2007

Today's featured article

The **Theatre Royal, Drury Lane** is a theatre in the Covent Garden district of London, facing Catherine Street and backing onto Drury Lane. The building standing today is the most recent in a line of four theatres at the same location dating back to 1663. For its first two centuries, Drury Lane could "reasonably have claimed to be London's leading theatre" and thus one of the most important theatres in the English-speaking world. Through most of that time, it was one of a small handful of **patent theatres** that were granted **monopoly** rights to

In the news

- At the **2007 National People's Congress**, the People's Republic of China (*flag pictured*) adopts its first law regulating property ownership.
- The **World Wildlife Fund** announces that the **Bornean Clouded Leopard**, found in

About the Wiki

- A potentially very useful tool to pool experiences – the Atmospheric Dispersion *Wiki*

A Wiki has been launched on the subject of Atmospheric Dispersion Modelling

A Wiki provides something that we normally miss in the community of atmospheric dispersion professionals:

An easy possibility to provide feedback and **pool our experiences** with procedures, data sets and models related to our work.

11th Harmonisation Conference Cambridge 2007

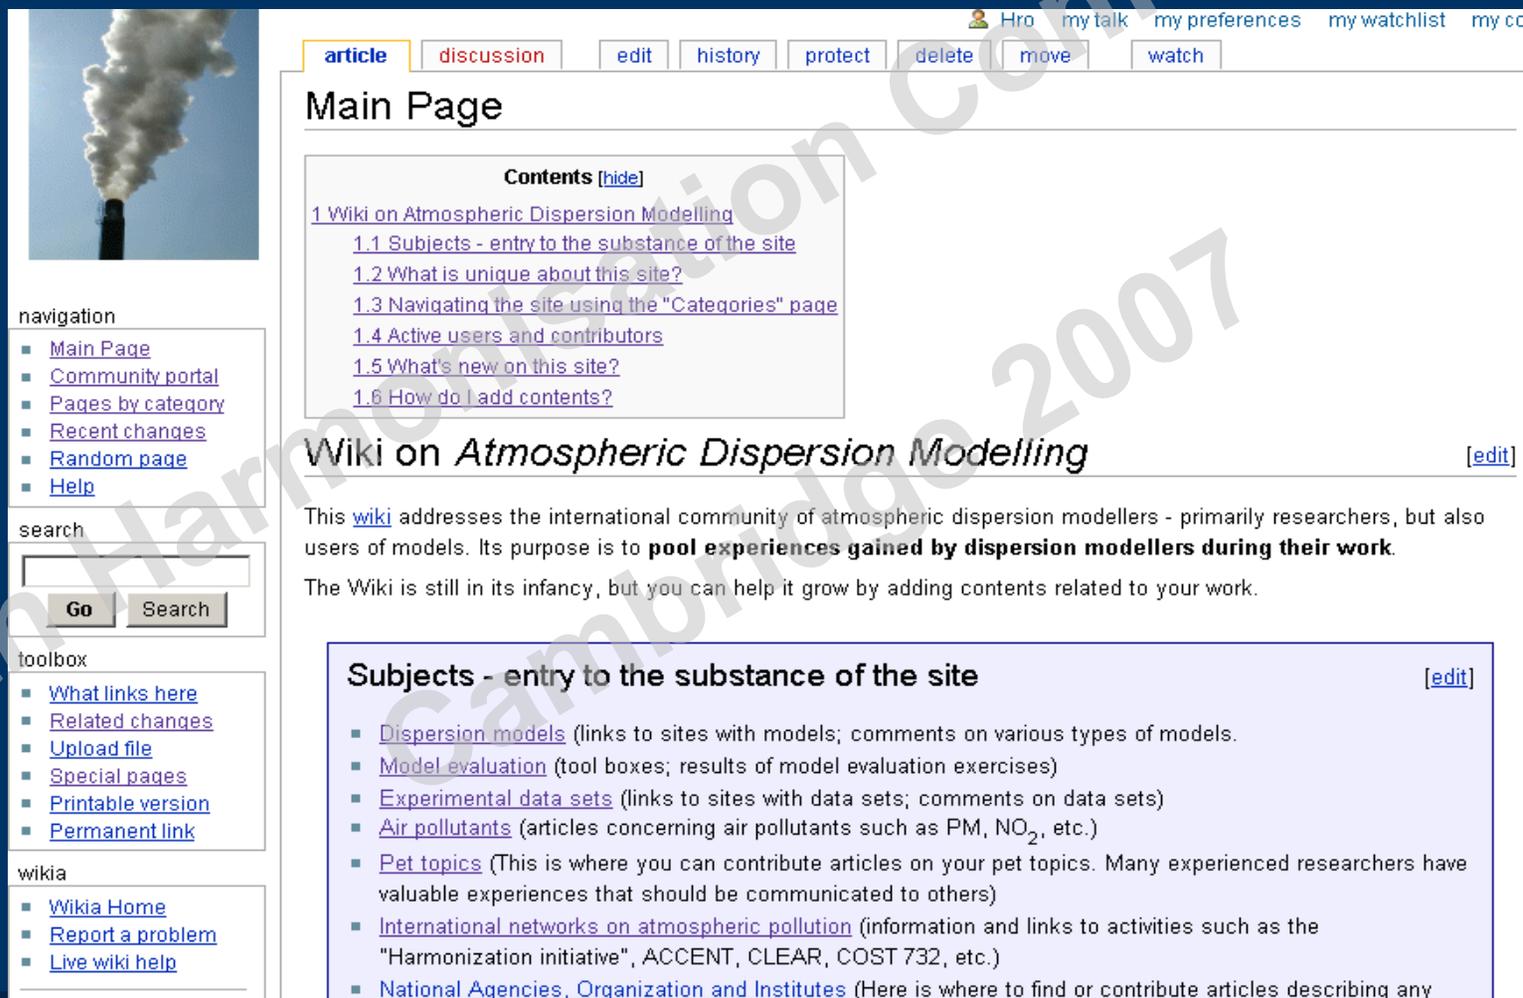

11th Harmonisation Conference Cambridge 2007

A unique feature of the Atmospheric Dispersion Wiki

- Warnings against pitfalls and common mistakes are of high interest.
- Researchers are encouraged to report on pitfalls they encounter, and which they would like to warn others against.

Wiki on Atmospheric Dispersion Modelling [\[edit\]](#)

This [wiki](#) addresses the international community of atmospheric dispersion modellers - primarily researchers, but also users of models. Its purpose is to **pool experiences gained by dispersion modellers during their work**.

The Wiki is still in its infancy, but you can help it grow by adding contents related to your work.

Subjects - entry to the substance of the site [\[edit\]](#)

- [Dispersion models](#) (links to sites with models; comments on various types of models.)
- [Model evaluation](#) (tool boxes; results of model evaluation exercises)
- [Experimental data sets](#) (links to sites with data sets; comments on data sets)
- [Air pollutants](#) (articles concerning air pollutants such as PM, NO₂, etc.)
- [Pet topics](#) (This is where you can contribute articles on your pet topics. Many experienced researchers have valuable experiences that should be communicated to others)
- [International networks on atmospheric pollution](#) (information and links to activities such as the "Harmonization initiative", ACCENT, CLEAR, COST 732, etc.)
- [National Agencies, Organization and Institutes](#) (Here is where to find or contribute articles describing any

- [International networks on atmospheric pollution](#) (information and links to activities such as the "Harmonization initiative", ACCENT, CLEAR, COST 732, etc.)
- [National Agencies, Organization and Institutes](#) (Here is where to find or contribute articles describing any national agencies, organizations and institutes that deal with atmospheric dispersion)
- [User communities](#) and national societies dealing with dispersion modelling. Links and issues of particular interest.
- [Supplementary Information](#) (Here is where to contribute or to look for miscellaneous dispersion modelling technical articles which do not fit into any of the above categories)

Pet topics...

Pet topics - overview and introduction

Many knowledgeable researchers have pet subjects. They possess a vast experience, which newcomers to the field lack. Here, experienced researchers can in an informal way issue advice related to these pet subjects.

For instance, you may be able to warn others against certain pitfalls and common mistakes.

Do you feel that certain issues are under-exposed and should be more widely communicated to the atmospheric modelling community?

Here is your chance to do something about it!

Write an article here on the web. [How?](#) Make a link to it from the current page, and possibly also from other relevant pages. As the present page grows, it will be re-structured, and pertinent links will be added.

Experimental data sets

Role of the present wiki

[\[edit\]](#)

Web sites with data sets on atmospheric dispersion are plentiful.

The present site is intended to have at least two roles in respect to data sets:

- **Lists of data sets.** The site provides an entry to other sites where data sets can be obtained. The big potential of this site is that anybody can add links to *repositories of data sets* (use the page [Data set repositories](#)), as well as to *individual data sets* (use the page [List of individual data sets](#)). Therefore, the site has the potential to become more comprehensive than a site maintained by a single web master. However, it does not include a structured search function.
- **A forum for communication of experiences with data sets.** This site provides an opportunity for users of a data set to report their experience. Typically, data sets have pitfalls, such as data errors or insufficient documentation. Here is an opportunity to learn from other users of a data set. In order to establish a forum for a particular data set, or contribute to it, proceed to the page entitled [Forum for individual data sets](#)

Contributions

Contributions can be **actual information content**, or they can consist of **links to material elsewhere** on the web.

The site has the potential to become **far more comprehensive** than a site maintained by a single web master, because anyone can contribute easily to the Wiki.
