

DISPERSION MODELLING OF PARTICULATE MATTER CONCENTRATIONS AT THE INTRAURBAN SCALE: EPIDEMIOLOGICAL APPLICATIONS

J. Gaines Wilson and Peyman Zawar-Reza

10th International Conference on
Harmonisation within Atmospheric
Dispersion Modelling for Regulatory
Purposes

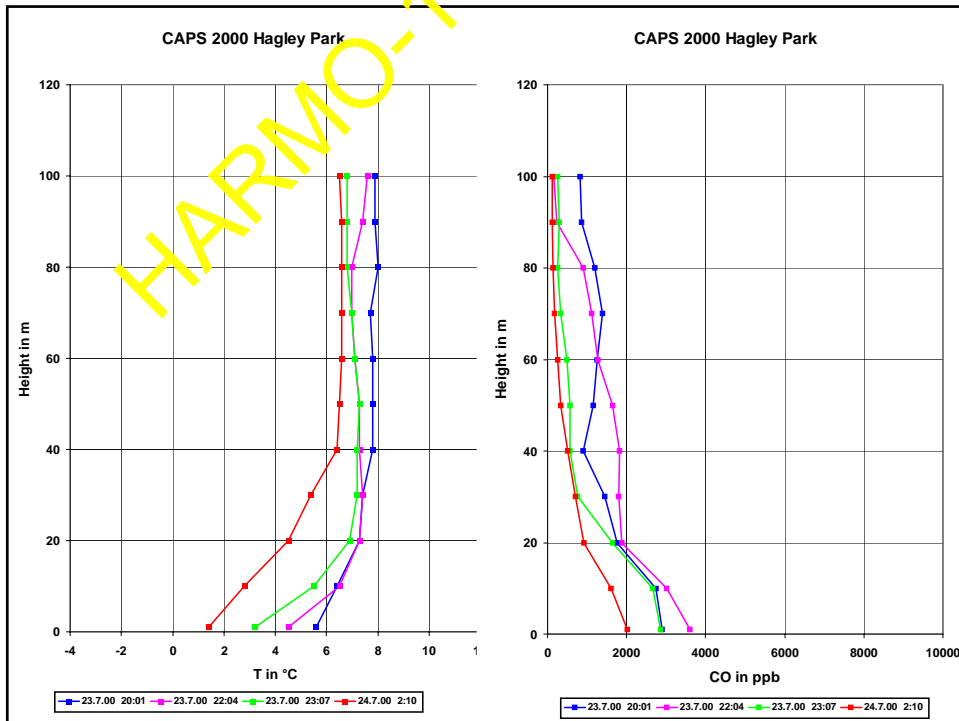

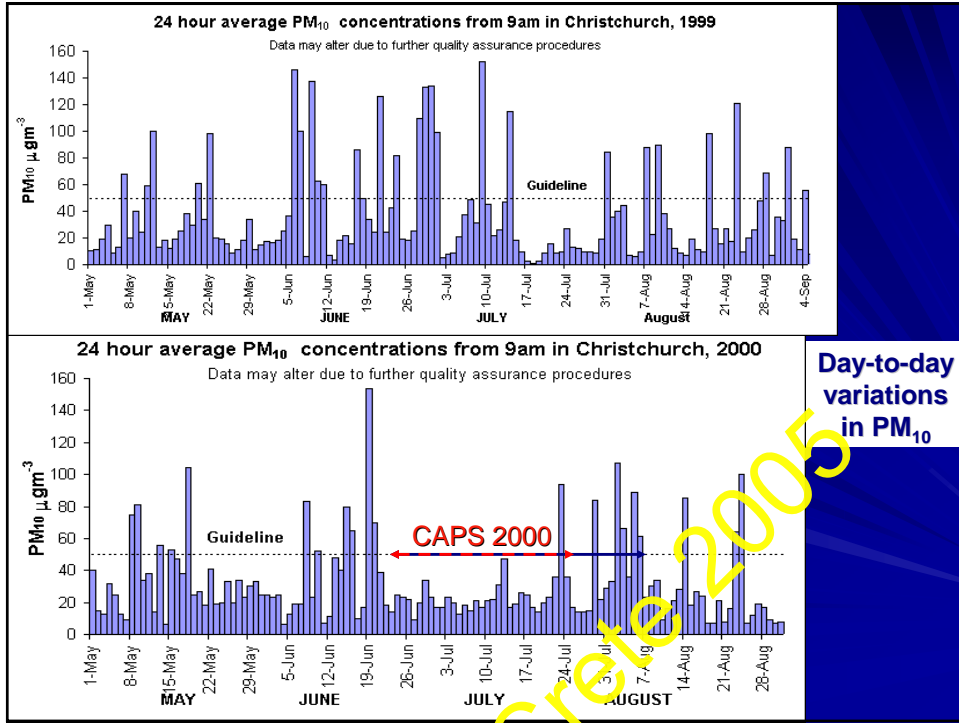

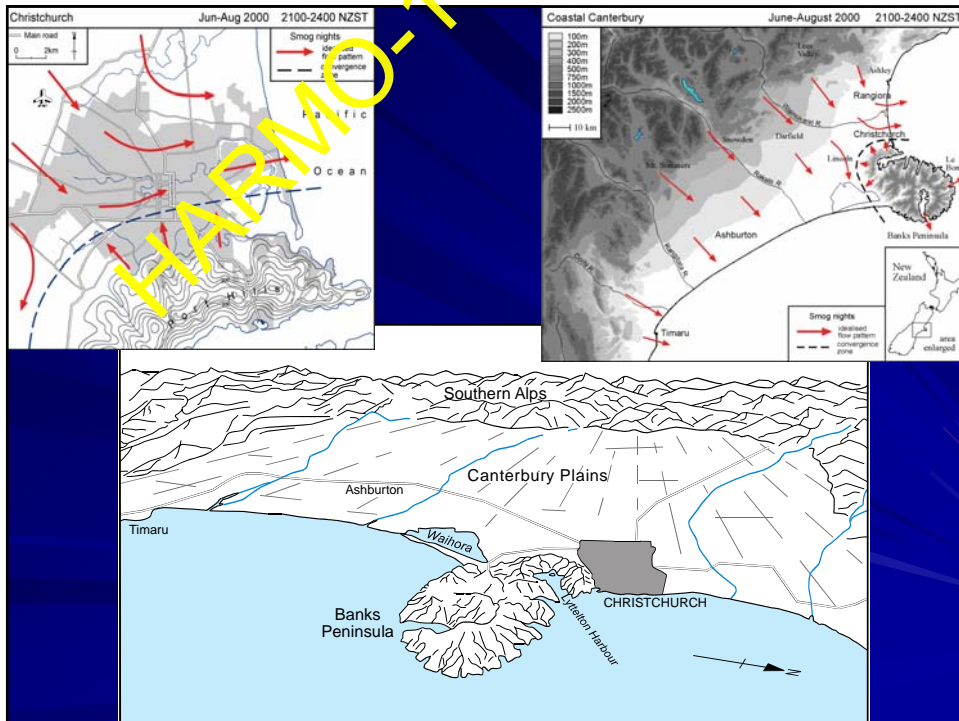

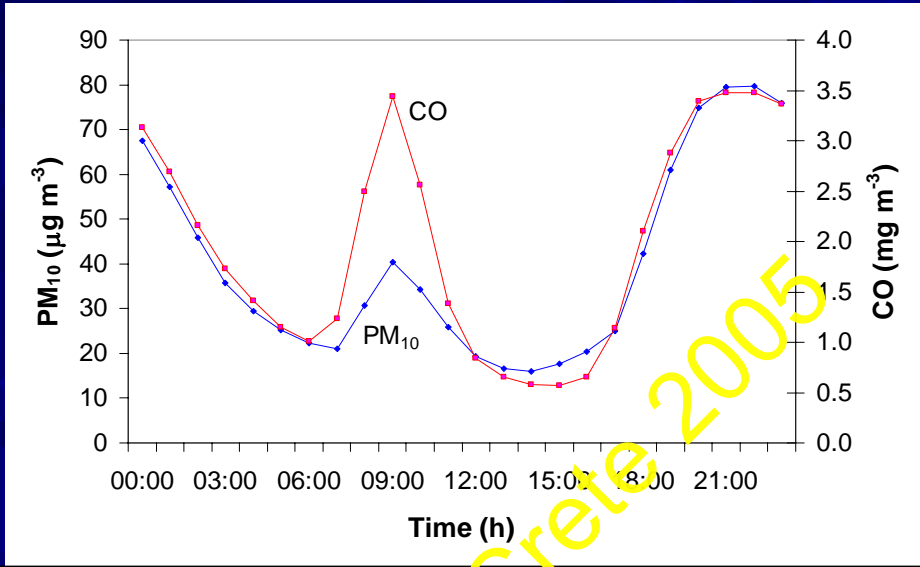

Background to the air pollution problem

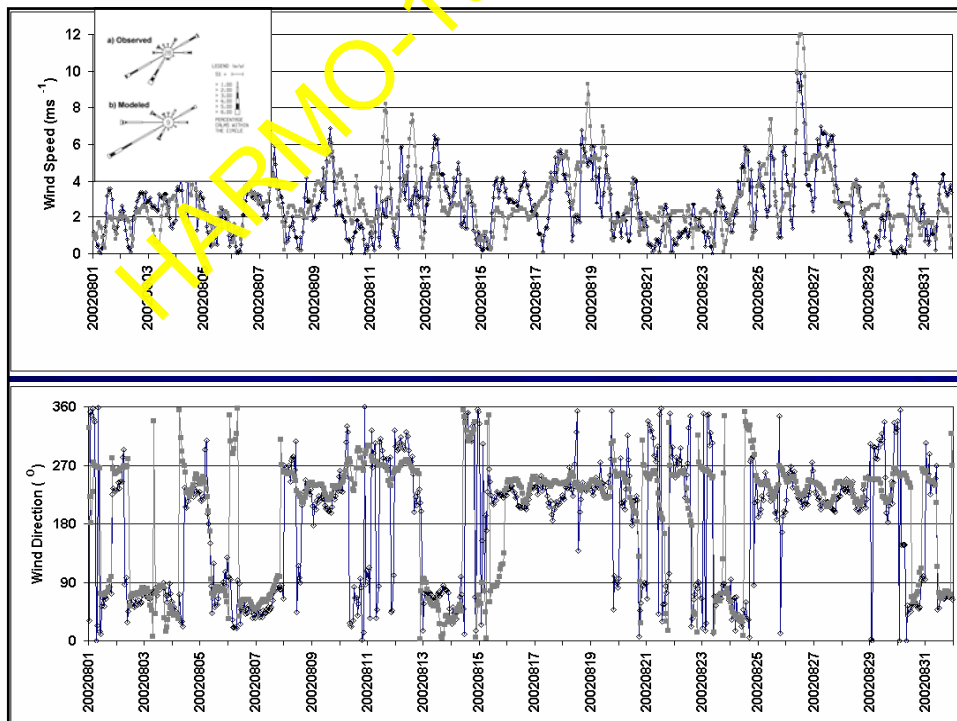

- Poor dispersion characteristics due to the formation of a nocturnal inversion layer
- Emissions from solid-fuel burners
- Some contribution from traffic

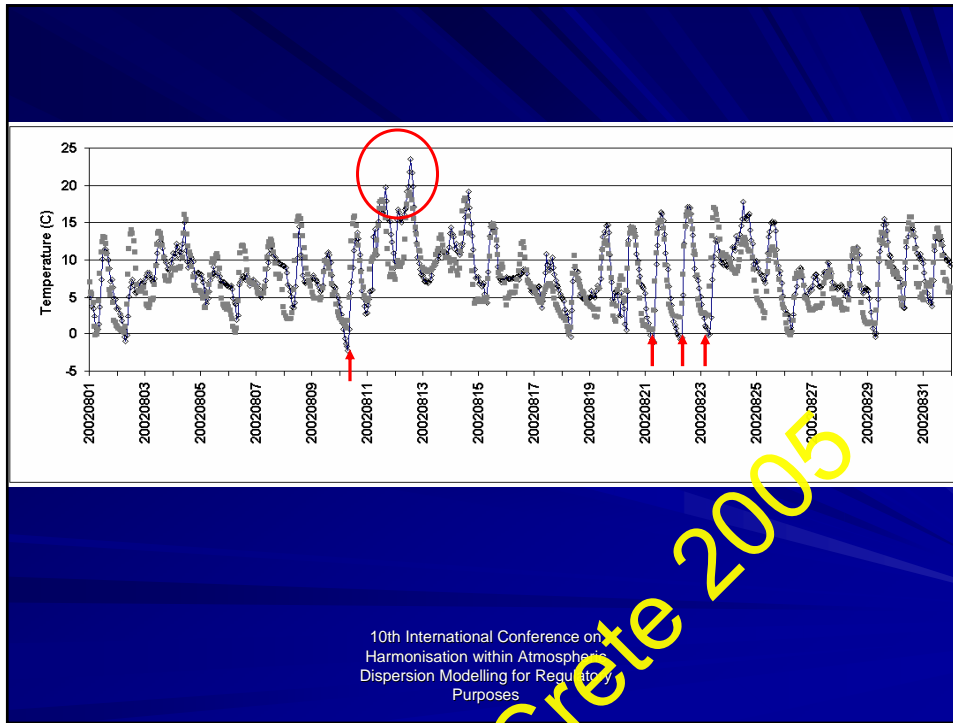

Diurnal cycle of PM₁₀ and CO (average of 1988-99 winter days)

Net-all ways and Surface Energy Balance

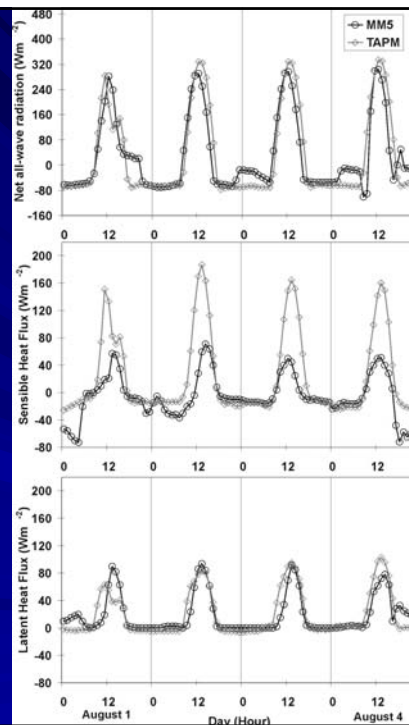

$$Q^* = Q_F + Q_L + Q_G$$

Q^* = net-all wave energy

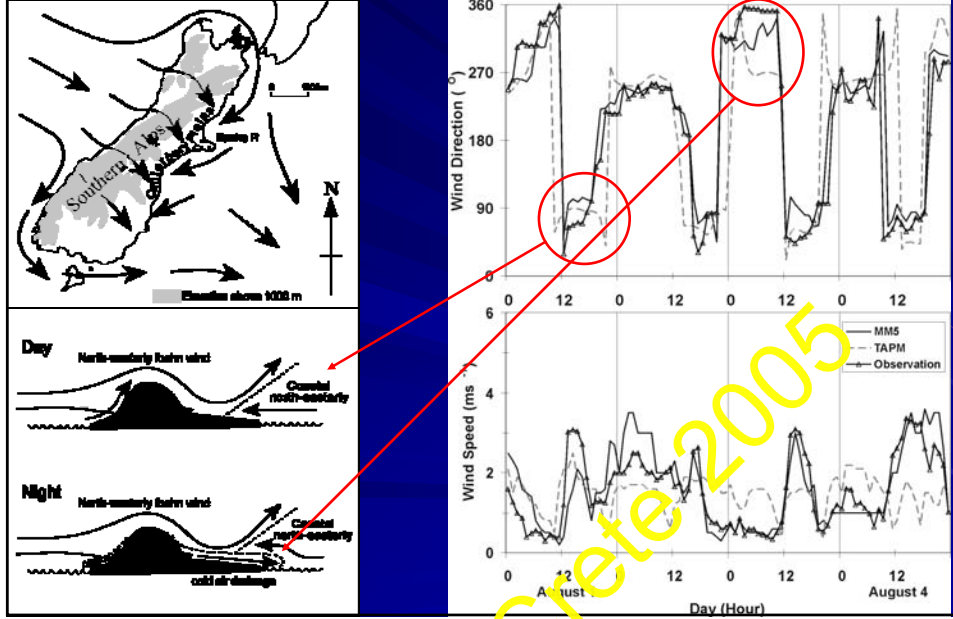

Q_F = Sensible heat flux

Q_L = Latent heat flux

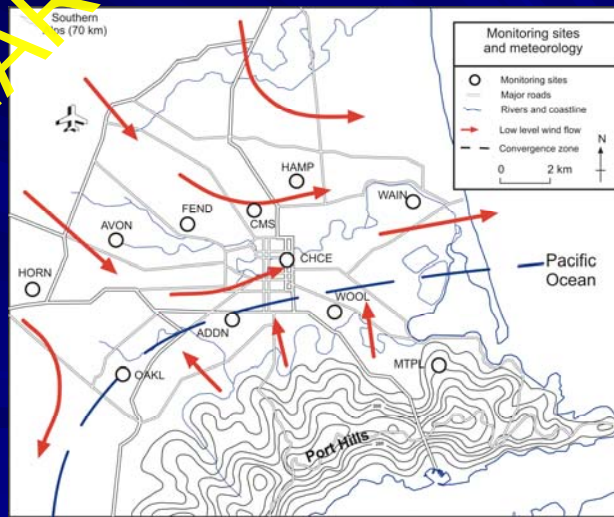

Q_G = Ground heat flux

Local Winds

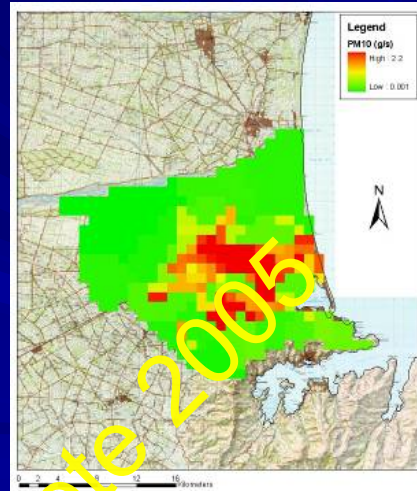

Monitoring Network

PM₁₀ Emission Scenario

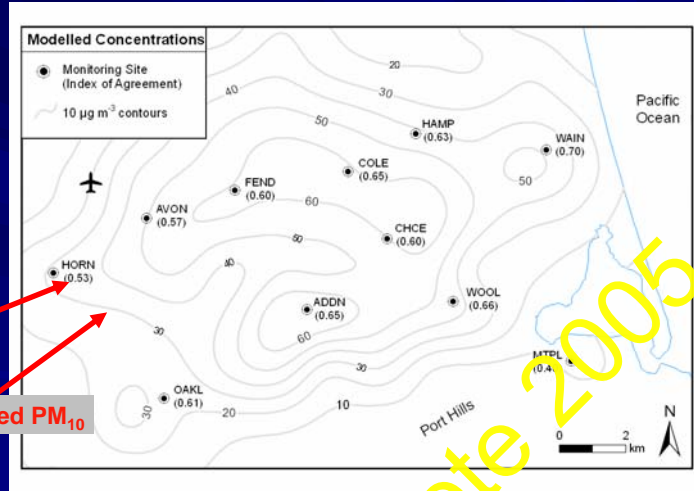

- Prepared by Environment Canterbury
- Coarse temporally
- Represents a 'typical winter day'
- No weekday, weekend differences.
